

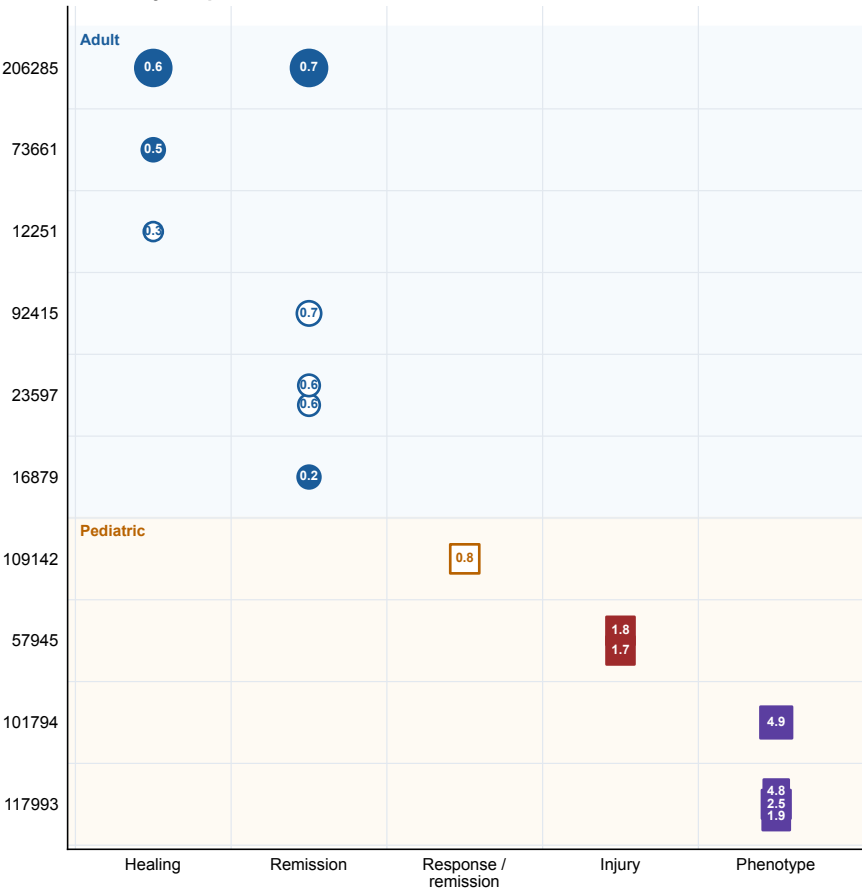

Figure 3 | Age-stratified endpoint evidence map

a Cohort-by-endpoint evidence matrix

b Age-aware readout

Adult direct endpoints

8 models; all OR < 1
lower score favors healing / remission / response

Pediatric remission

1 model; OR < 1
directionally consistent, not adult validation

Pediatric injury

2 models; OR > 1
higher score marks mucosal injury

Pediatric phenotype

4 models; OR > 1
higher score marks IBD phenotype

No single pooled pan-IBD estimate is displayed.

Circle: adult or adult/mixed; square: pediatric. Filled: $p < 0.05$; open: $p \geq 0.05$. Number inside marker is OR.
